Helene Ross Bogutz established the Early Detection Ovarian Cancer Symposium prior to the end of her brave and graceful battle with ovarian cancer so that other women would not have to suffer and die from this disease.

Ovarian cancer is curable in its early stage, but there are currently no tools for the early detection of ovarian cancer. This symposium will highlight recent advances in the application of ‘omic’ technologies for early detection of this disease with the goal of bringing together clinicians and researchers from across many disciplines and institutions in order to encourage collaborations toward advancing the field of ovarian cancer research.

**John J. Mikuta Lecturer**

Steven J. Skates, PhD
Massachusetts General Hospital, Harvard Medical School

**Hosted by:**
Mark A. Morgan, MD
Chief, Gynecologic Oncology

Ronny Drapkin, MD, PhD
Director, Ovarian Cancer Research Center
