Postdoctoral position in the transcriptional profiling of striatal circuits: University of Pennsylvania

A postdoctoral position is available to explore transcriptional diversity within adult mouse striatal circuits. The work will involve single-neuron and population-derived transcriptional profiling based upon genetic and viral identification of specific circuit components. For further information, see http://www.med.upenn.edu/fuccillolab/.

Ideal candidates will be creative, highly motivated individuals from any STEM field with a strong background in quantitative transcriptional analysis. Highly desirable skills include programming knowledge and the ability to work with large data sets. Standard molecular and viral neurobiology techniques are considered advantageous. PhD, MD or MD/PhD required.

Prospective candidates should send a cover letter, C.V. and contact information for 3 referees to: Marc Fuccillo, MD/PhD, Assistant Professor of Neuroscience, fuccillo@mail.med.upenn.edu
