Hematology-Oncology/Abramson Family Cancer Research Institute Seminar Series

University of Pennsylvania, School of Medicine
Seminars are held on Tuesdays at 12:00 noon in CRB Austrian Auditorium unless otherwise noted

September 7
Douglas C. Wallace, Ph.D.
Center of Mitochondrial and Epigenetic Medicine, Children’s Hospital of Philadelphia
A mitochondrial bioenergetic approach to cancer and related disorders

September 14
John Morgan Building Reunion Hall
Shelley L. Berger, Ph.D.
Department of Cell and Developmental Biology
Histone covalent modifications in epigenetic regulation

September 21
CANCELED FOR AFCRI SAB MEETING

September 28
Mick Bhatia, Ph.D.
McMaster Stem Cell and Cancer Research Institute
Characterization of normal and Leukemic hematopoietic tissue in the human

October 5
Adolfo A. Ferrando, M.D., Ph.D.
Institute for Cancer Genetics, Columbia University
Oncogenic transcriptional networks in T-ALL

October 12
J. Alan Diehl, Ph.D.
Department of Cancer Biology
Molecular analysis of Cyclin D1 accumulation and action in human cancer

October 19
Ali Shilatifard, Ph.D.
Stowers Institute for Medical Research
Lessons learned from yeast about human leukemia

October 26
Ellen Pure, Ph.D.
Wistar Institute, Departments of Medicine, Microbiology, and Pharmacology
Remodeling the tumor microenvironment: The role of the fibroblast protease FAB

November 2
Raymond J. MacDonald, Ph.D.
University of Texas Southwest Medical Center
Transcriptional control of pancreatic development

November 9
Grand Rounds: Medical Alumni Hall, 1 Maloney
Barry Coller
Rockefeller University
Personalized medicine: The antiplatelet therapy experiment

November 16
Boris Pasche, M.D., Ph.D.
The University of Alabama at Birmingham
TGF-β signaling and amplitudemodulated electromagnetic fields in cancer development and progression

November 23
Monica Bessler, Ph.D.
The Comprehensive Bone Marrow Failure Center at The Children’s Hospital of Philadelphia
The role of telomere maintenance in bone marrow failure and cancer predisposition

November 30
Klaus Rajewsky, M.D.
Immune Disease Institute, Harvard Medical School
Modeling Epstein-Barr-Virus driven immune surveillance and B cell lymphomagenesis in the mouse

December 7
Sandra Ryeom, Ph.D.
Department of Cancer Biology
Thrombospondin-1 mediates oncogenic Ras-induced senescence in pre-malignant lung tumors downstream of p53

December 14
Frederick W. Alt, Ph.D.
Howard Hughes Medical Institute
Mechanisms of chromosomal translocations in Lymphomas and other cancers: Mapping the translocatome

Seminars will resume on January 4, 2011. The winter calendar will be available in late November.
