About the Program

Currently, most newly identified pancreatic cysts are diagnosed incidentally during the workup of another, unrelated condition. Most lesions are premalignant and many actually harbor cancer at the time of diagnosis. Practitioners faced with a pancreatic lesion are often in need of a resource to evaluate the patient and identify next steps. More importantly, the diagnosis of a pancreatic cyst can be stressful and confusing for patients so it is critical that when appropriate they receive timely assessment, treatment and long-term surveillance for their condition.

The regional Penn Pancreatic Cyst Program offers a single point of access to a collaborative, multidisciplinary team of experts in pancreatic cyst management whose goal is to optimize clinical care, propel research and enhance the collective education and expertise of the field.

Services

Physicians from gastrointestinal surgery, gastroenterology, radiology and pathology/cytology collaborate to ensure patients receive the highest quality care including:

- Timely and thorough evaluation by clinicians
- Efficient diagnostic testing
- Review of history, radiology, cytology and surgical pathology at the regular Pancreatic Cyst Management Conference
- Development of a comprehensive treatment plan
- Patient and family education about pancreatic cyst management
- Regular and prompt communication with referring providers
- Long-term surveillance
- Information about new translational and clinical research studies to discover new avenues for diagnosis and treatment
- Expertise in a variety of surgical options for pancreatic cysts including minimally-invasive approaches for which cysts are often well-suited

Referrals

Individuals who may benefit from evaluation at the Penn Pancreatic Cyst Program include patients with newly diagnosed or suspected pancreatic cysts, including:

- Intraductal Papillary Mucinous Neoplasms (IPMN) – both main duct and side branch variants
- Serous cystadenomas (SCA)
- Mucinous cystic neoplasms (MCN)
- Pseudopapillary tumors (AKA Frantz tumor, Hamoudi tumor)
- Cystic neuroendocrine tumors
- Pseudocysts secondary to pancreatitis
- Cysts for which the cause is unknown
- Family history of von-Hippel Landau syndrome

The program also welcomes patients seeking second opinions regarding diagnosis or therapy as well as those interested in participating in clinical research studies for pancreatic cysts.

LOCATION

Perelman Center for Advanced Medicine
4th Floor, West Pavilion
3400 Civic Center Boulevard
Philadelphia, PA 19104

For more information or to refer a patient to the Penn Pancreatic Cyst Program, please call 877.937.PENN (7366).

Penn PhysicianLink

Consults • Referrals • Transfers

For more information on how to make Penn PhysicianLink work for your practice and your patients, call 877.937.PENN (7366) or visit PennMedicine.org/PhysicianLink.
Pancreatic Cyst Program

■ Directors

Nuzhat A. Ahmad, MD
Associate Director, Endoscopy
Associate Professor of Medicine
Nuzhat.Ahmad@uphs.upenn.edu
215.687.1537

Charles M. Vollmer, MD
Director, Pancreatic Surgery
Professor of Surgery
Charles.Vollmer@uphs.upenn.edu
