

NIDDK P30 Center for Molecular Studies in Digestive and Liver Diseases

NIDDK P30 Center for Molecular Studies in Digestive and Liver Diseases Research Seminar

Utpal Paiyani, MD

Associate Professor of Medicine
Division of Endocrinology
Department of Medicine
Columbia University

“Maladaptive regeneration — Notch at the transition of NASH, fibrosis and HCC”

Thursday, December 15, 2022

12:00 – 1:00 PM EST

901 Biomedical Research Building

The Paiyani Lab exists at the intersection of development, metabolism, and cancer biology. From bench to bedside and back again, we use clinical observations to fuel basic and translational science. Our lab aims to uncouple obesity from its metabolic complications by identifying novel pharmacologic targets in obesity medicine.

Our current efforts modulate the Notch signaling pathway in liver, adipose, and β cells to ameliorate some of the leading causes of worldwide morbidity and mortality, including type 2 diabetes mellitus, non-alcoholic fatty liver disease (NAFLD), and non-alcoholic steatohepatitis (NASH).

The meeting will start promptly at 12:00 pm. Please be on time.
