

# **Penn Graduate Women in Science and Engineering | PGWISE |**

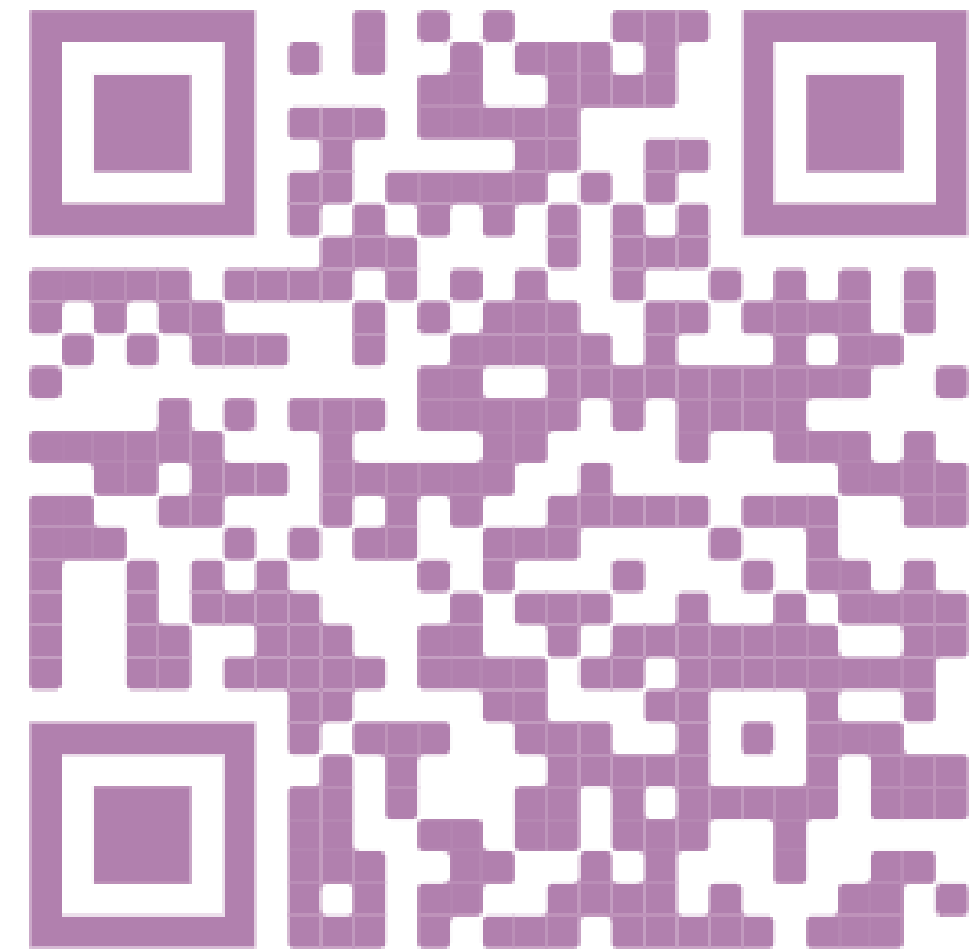

BGS Orientation F2022

## Our Mission

The under-representation of women in STEM is a detriment to everyone in STEM fields and our nation as a whole.

---

PGWISE aims to correct this disparity by through a combination of community outreach and career development training targeted at women and gender minorities, but open to all who wish to participate and share our goals of advancing women in STEM. Recruiting and retaining women in STEM is a tangible way that we as graduate students can change the culture of science and education at the University of Pennsylvania and beyond.
