Dr. George Raiziss Rounds

Faculty: Ben Black (blackbe@pennmedicine.upenn.edu)
         James Shorter (jshorter@pennmedicine.upenn.edu)
         TA: Korrie Mack (kmack@pennmedicine.upenn.edu)

Meeting Times:
Wednesdays:  12:15-1:30   Room 255, Anatomy/Chemistry
Thursdays:  noon-1:00   Austrian Auditorium, CRB
            1:00-2:15   JF Library, Anatomy/Chemistry

TA office hours:
Day: Tuesday   Time: 11am-12pm   Location: 801 Stellar - Chance
If students cannot attend scheduled office hours, please email Korrie in advance to set up a different time.

Course Description: This is a discussion-based class in which students study, read, and present the
published work of the invited Raiziss Rounds seminar speakers. The goal of the class is to develop
the students' ability to understand the rationale behind the experiments, critically analyze the work,
communicate their thoughts to others, and to engage in focused scientific discourse. The Wednesday
classes will run in a journal club format with students giving presentations of the papers for that week's
speaker. Thursday will be the noon seminar by the invited speaker, followed by lunch with the speaker.

Grading will be broken down as follows:
Oral presentations: 45%
Participation in group discussions: 30%
Attendance: 25%

Presentations: In each Wednesday class, we will discuss 1-2 papers recommended by the invited speaker
for that week. Students will be assigned to prepare presentations on a rotating basis, and are required to send the papers in PDF format to the TA on the Friday prior to class. Presentations should be prepared
in Powerpoint or similar format. There should be sufficient time allotted for background and introduction
at the start of each presentation. Papers should be discussed in detail, with emphasis given to assessing the
rationale for each experiment and whether or not the experiment succeeded in testing the hypothesis in
question. At the end of each paper, there should be a summary of what the main findings were, what is
left unanswered, and a proposal for an experiment to solve the unanswered aspects of the work. Identify
the weak spots of the paper, and what should be done to further support or even refute the hypotheses
ventured. Any difficulty in understanding methods should be figured out prior to the presentation (Korrie
is available to help explain methods during office hours). Presenters should be prepared for interruptions
throughout the talk, since this is a discussion-based class (see below).

Group discussions: All students are required to read the assigned papers prior to coming to class.
During the presentations, all students are expected to take an active role in the discussions. Questions
regarding experimental rationale and/or technical details are desired since they lead to more discussion.
Providing answers to these questions are important contributions, as well. Comments and opinions
regarding the quality, importance, or logic behind the work under examination are also very helpful ways
to participate in these discussions.

Attendance: All students are required to attend every class, seminar, and lunch with the seminar
speakers. Unexcused absences that are not approved by the TA prior to the class or seminar will
negatively affect the final grade, and three such absences will result in a failing grade.
