

Abramson Cancer Center - Tumor Virology Program
& the Department of Microbiology
-present-

Drs. Gertrude and Walter Henle

The 2010 Henle Lecture

Wednesday, March 10, 2010

12:00 p.m. – 1:00 p.m.

Clinical Research Building

Austrian Auditorium

"Pathogenic and Symbiotic Interactions Between the Virome and the Genome: New Paradigms and New Players"

Herbert (Skip) Virgin, M.D., Ph.D.

Washington University

Edward Mallinckrodt Professor and Chair, Pathology and Immunology

Professor, Molecular Microbiology

Professor, Medicine

Dr. Virgin's research activities focus on the interface between virology and immunology, working from the hypothesis that viruses manipulate the immune response using immunoevasive gene products as the immune response attempts to eradicate the virus. The diseases that Dr. Virgin studies include lymphoma induced by γ -herpesviruses, vascular disease including atherosclerosis induced by herpesviruses, and enteric disease induced by noroviruses.
