NEW FRONTIERS *in* DIABETES:

*Integrating Scientific Advances
with Patient Care*

Thursday, November 1, 2007

University of Pennsylvania, Houston Hall

November is American Diabetes Month, and the University of Pennsylvania endeavors to raise awareness about the increasing incidence of diabetes and its life-altering complications. The University of Pennsylvania's Institute for Diabetes, Obesity, and Metabolism (IDOM) and the Penn Rodebaugh Diabetes Center invite our patients and their families, valued friends of the Health System, and interested community members to join prominent Penn physicians and researchers for an event that will provide education and inspiration to those whose lives have been affected by diabetes.

Hear from a panel of Penn's internationally-recognized diabetes experts on topics such as the importance of proper nutrition and exercise in controlling diabetes; the latest advances in treatment modalities and the leading edge research being conducted at Penn to find a cure for diabetes.

There will be an opportunity to ask questions of the panelists.

PENN Medicine has been recognized as one of the top ten medical institutions in the country for diabetes research. Penn's Rodebaugh Diabetes Center is the only comprehensive diabetes center in the Philadelphia metropolitan region, providing its patients access to the most sophisticated diagnostic and treatment modalities through a personalized, family-centered team approach. Our patients and their families receive attention individually and through group interaction from certified instructors on topics such as nutrition, medications, exercise, glucose monitoring, coping with a chronic disease, and the prevention of complications.
