The Parkinson’s Disease and Movement Disorders Center of the University of Pennsylvania (PDMDC)

The PDMDC has a long and distinguished history of treating people with Parkinson’s Disease and other movement disorders. As a Parkinson Foundation Center of Excellence and one of the leading centers in the world for comprehensive treatment of these conditions, our mission is to provide exemplary care to people with PD as well as offer support and education to patients and family members. Much has changed over the years on the management of PD as new medications and surgical options have become available, leading to a better quality of life for those with PD. Information on the value of exercise has led the medical community to embrace more nontraditional forms of treatment. This program will provide an update to one that was originally presented in 2006. In addition to the thought provoking talks that you will hear, we have invited community providers with relevant information or services to display.

Acknowledgements

The PDMDC would like to thank:

The Parkinson Council

The pharmaceutical and device companies represented here today for their generous support. Please visit their tables during the health fair.

THE 15TH ANNUAL
Jane C. Wright
PATIENT AND
CAREGIVER
