To assay Transformation of Cells:
- Carefully remove media
- Wash w/ PBS once carefully not remove colonies
- Fix w/ 100% Methanol 10 min, on plate
- 0.05% Methylene blue in tap water 5 mins
- Rinse w/ distilled H2O
- Flat colonies light blue
- Transformed colonies dark blue

T75
100 mm plates

Phenotype correlates w/ transformation
- Can use colonies for gene expression and using
  for studying gene

*Check for pulling up*
- Spreading does not indicate transformation
