Penn Medicine Hospital of the University of Pennsylvania Transport guidelines for patients with known or suspected COVID-19

Last updated: March 30, 2020

Call ahead to receiving area: Ensure that receiving area is expecting the patient Indicate suspected or confirmed COVID-19

Call ahead to security (if needed):

- Agree on the route before departure
- If transporting from PCAM to ED: consider clearing bridge

Review personal protective equipment (PPE):

- Patient should have a gown, clean bed sheet, surgical mask
- Personnel PPE should match the exposure risk category
- PPE should be newly donned
- Rapid response personnel should not transport (if possible)
- Nurse at receiving site can help doff PPE

Transporter

Drives patient bed

For PPE help, call Nursing Administrator: 215-301-2797

Transport

Monitors patient,

Helps direct bed,

IV pole,

assistant (ideally RN) Overarching transport considerations:

 Minimize transport of COVID-19 patients & patients under investigation (PUIs)

- Protect the transport team
 - Avoid contamination of surfaces *en route*

• Ensure the patient is stable for transport

Clean assistant

Touches elevator buttons & other clean surfaces, Carries wipes & clean bin/bag, Observes team

Security personnel (Needed for PCAM & clinical emergencies)

> Keeps self & others at least 6 feet away, NO elevator travel

Respiratory therapist (if intubated)

Provides respiratory care & monitoring

Clean bed/wheelchair:

- If bed/wc not staying at destination, remove used sheets and wipe down rails, high-touch areas
- Place clean sheet over bed and railings
- Place bed in area where it does not touch walls and is away from personal traffic
- Place visible "SOILED" sign(s) on top of sheet
- Contact EVS for bed/cleaning, indicate suspected or confirmed COVID patient

Clean transport equipment:

• Wipe down (with hydrogen peroxide/bleach) surfaces of bed/wheelchair, railing, ventilator, IV pump, transport monitor, other equipment

JURING (ROLES)
