Print COVID-19 Vaccine Info, QR Code, Test Results on AVS

Impacted Users: Clinicians

Introduction: To enable patients to share information about their COVID-19 vaccination and test results without sharing other PHI, COVID-19 reports can be added to the AVS section for printing.

Workflow:

1. COVID-19 reports are available in the preview AVS Section under Available Documents.

2. Clinicians can add the desired COVID-19 report(s) by clicking on the + next to the report name so it will be added to the Documents to Print section.
The QR codes that appear in these printed reports are created according to an open industry standard called SMART Health Cards. They contain verified information and only what is relevant to COVID-19, including your legal name, date of birth, COVID-19 vaccination information, and your most recent COVID-19 test result. You decide how much to share and with whom—you can share only your test results, only your vaccination information, or both. To learn more about SMART Health Cards, refer to the following website:

https://smarthealth.cards/
The QR code will only appear in PDF format once the COVID-19 reports are printed. This can be found in Chart Review under the Media tab. In the Preview AVS section, it will display the following text:

**Verification QR Code**
The QR code will display here when printed.
